

London cabbies set to get on board with Contactless

Consumer demand for making Contactless payments continues to increase and with 25 black cabs across London set to trial Contactless payment terminals with Streamline; it's easy to see why. If demand meets expectations, we plan to extend it to more vehicles – so look out for the Contactless cabs.

Contactless payments provide taxi drivers with an alternative way of accepting fares of £10 or less. It's fast - there's no need to count out the correct change or wait for Chip & PIN authorisation and payment is normally completed in around 5 seconds with a quick tap or wave from a Contactless-enabled card. Also, with less cash on board, tallying up should be simpler and safer.
